Elevators SA200/SA300/SA400

Clean and gentle

Elevator SA200

Wash system for fruit and vegetables made of stainless steel comprising a sorting grid, washing container and transport chain. The washing of the transported items takes place in the washing container using a fresh water spray on the transport belt. The transport speed is infinitely adjustable as a result of the frequency converter. The is suitable for processing all kinds of foods, e.g. fruit, berries and vegetables.

Elevator SA300

The SA300 perfectly fits in performance into the voran® product range. Despite lower hourly output, the SA300 convinces with the same characteristics and advantages as the SA400. For getting best crushing results of vegetables the machine can be equipped optionally with a suitable tool.

Removable centrifugal mill for various arrangement options in the whole system and for simpler cleaning

Wash chop

SA-Series
WALC40
WAR65

Press

EBP-Series
EP-Series

Pasteurize

PA-Series

Equipped with a coarse filter for the circulation water

Floor drainage of the machine

Strong and fast

The usage with a Packing press is possible with optional dosing hopper.

Removable centrifugal mill for various arrangement options in the whole system and for simpler cleaning

Simple, easy-to-clean design with affordable sieve inserts

The delivery scope of the Centrifugal mill (SA300 and SA400) includes a 7 mm, 9 mm and 12 mm cutting screen by default.

Simple, robust drive

Covers can be opened without tools for simple cleaning

Removable sieve baskets

Adjustable machine bases for ideal levelling

Elevator SA300 / SA400

With the SA300 as well as the SA400 we offer a perfectly matched and strong combination of a wash and grinding system. The combined washing system on the one hand cleans using air blown from water stored below (only with the SA400) and on the other by using flowing cutters.

The fresh air blown from the water of the SA400 keeps the fruit in constant movement. The contact cleans the fruit as they hit each other in the flowing water.

This flow of water on the grinding system affects the opposite cutting edges and thus removes swimming foreign bodies that are then collected in the capture baskets. These can be removed without tools and during operation. The flow system also allows the water container to be emptied completely. The built-in water jet keeps the fruit in constant movement and leads the fruit to the conveyor belt of the Elevator.

Due to its similar machine structure, the Elevator SA300 and SA400 only differ in its performance widely and convenience through its characteristics and advantages:

- Saves water through selectable operating mode of the fresh water jets
- Overflow monitoring
- Mill can be tilted by 180° without tools
- Covers can be opened without tools for simple cleaning
- High-pressure cleaner connection for cleaning the link conveyor
- All voran® Elevators can be filled with a Bulk bin tipper

The floor area under the machine can be cleaned easily.

The diagram shows the SA400-RM75 with open doors and centrifugal mill removed

Recirculating flow system for transporting fruit continuously out of the washing container

Additions

Due to its wide performance spectrum, the voran® Elevators offer different options for upstream and downstream machine combinations.

Bulk bin tipper GKE

The bulk bin tipper is designed to empty standard and special format large boxes of fruit at a controlled rate. Bulk boxes can be positioned on tipping system by hand truck or forklift. The whole tipping process takes around 20 seconds and can easily be stopped in any position. The complete system is built in stainless steel and features an integrated hydraulic power unit.

Every voran® Elevator can be filled up with a voran® Bulk bin tipper.

De-stoning machine EP1000

The flow of raw material is regulated by a belt-driven central auger. The DN65 connection for the mash outlet leads directly to the mash pump or mash basin.

Stones are ejected separately. The main cover can be removed without tools so that the screen for straining berries can quickly and easily be replaced with a screen for processing cherries, plums, apricots and other types of stone fruit.

Our mashing units are basically suited to separating hard and soft materials.

Belt press EBP580

This belt press is operated fully automatic and continuous, requiring only very limited monitoring effort. The stepless regulation of the pressing speed and force guarantees optimal juice quality and a high yield of up to 75%.

The Belt press is selected according to capacity requirements.

Technical data

SA200

Scale drawing shows SA200 with optional centrifugal mill RM2,2

SA300

SA400

Type	SA200 solo	SA200-RM2,2	SA300	SA400
Belt width in mm	230	230	300	400
Nominal output in kg/h	1.000	1.000	1.000 – max. 3.000	3.000 – max. 8.000
Drive power / mill in kW	0.25	0.25 / 2.2	0.55 / 4	0.55 / 7.5
Total connection output in kW	0.25	2.45	6.75	11.1
Electrical connection*	230V / 50Hz (single phase, 16A)	400V / 50Hz (three-phase, 16A)	400V / 50Hz (three-phase, 16A, neutral line required)	400V / 50Hz (three-phase, 32A, neutral line required)
Dimensions length/width/height in mm	2,730 / 730 / 2,180	2,900 / 730 / 2,180	3,540 / 940 / 2,590	3,650 / 980 / 2,570
Weight in kg (dry)	190	190 + 32 (mill)	350	510
Fruit feed height in mm	740	740	850	720
Mash delivery height (ah)	ah1 = 1,850	ah2 = 1,330	1,570	1,560
Complies with EC1935/2004	✓	✓	✓	✓
Connection for cleaning	G1/2" AG	G1/2" AG	G1/2" AG	HD M22x1,5 oder G1/2" AG
Fresh water connection	1/2" IG	1/2" IG	1/2" IG	1/2" IG
Connection for waste water and overflow	1 1/2" IG	1 1/2" IG	2" IG	DN50/75
